

EXERCISE: OUR FIRST EXCEPTION ASSERTION

- ▶ Why do we want to check for exceptions?
- ▶ `parse()` is a public API; we could break consumers of our library
- ▶ **Replace `assertion(s)` with a call to `assert.throws()`:**
 - ▶ Pass `opts` parameter with value: `{expectsValue: {}}`
- ▶ Reminder: run your tests via
 - ▶ `node test/bargs.spec.js`

Docs: <https://nodejs.org/api/assert.html>

ANSWER: OUR FIRST EXCEPTION ASSERTION

```
test/bargs.spec.js
```

```
const assert = require('assert');
const {parse} = require('..');

assert.throws(() => {
  parse({
    expectsValue: {}
  }),
  {
    name: 'TypeError',
    message: '/object is not iterable/'
  }
});
```
