UNDERSTANDING BARGS VIA EXAMPLE

Input Array	Output JS Object	Notes
["foo"]	{foo: true}	
["foo", "bar"]	{foo: true, bar: true}	
["foo", "-b"]	{foo: true, b: true}	
["foo", "-bar"]	{foo: true, bar: true}	
["foo=baz"]	{foo: "baz"}	
["foo", "baz"]	{foo: "baz"}	needs options object
["baz"]	{_: "baz"}	
["foo", "baz"]	{_: "baz", foo: true}	
["", "foo"]	{_: "foo"}	
["foo", "a", "foo", "b"]	{foo: ["a", "b"]}	needs options object
["foo", "foo"]	{foo: true}	

EXERCISE: PULL BARGS INTO THE TEST

- We want to update bargs.spec.js to "require" bargs and test the parse() function
- Add this to the top of bargs.spec.js:
 - const {parse} = require('..');
