ANSWER: TESTING SUCCESS

```
test/bargs.spec.js

// continued

assert.deepStrictEqual(
  parse(['--foo']),
  {_: [], foo: true}
);
```

FRAMEWORKLESS TEST PROBLEMS

▸ A test file full of assertions stops running at the first failure

▸ Avoiding this via `try`/`catch` means adding boilerplate

▸ Limited options for organization

▸ Can only run a single file at once; requires a custom script to avoid

▸ Limited reporting options
