SUITES IN MOCHA

‣ A **suite** *describes* a scenario, situation, or use case

  ‣ Has a `title` string

  ‣ Has a `body` function

‣ body can contain *one or more* tests

‣ `title` describes the scenario

‣ *Global* API:

  ‣ `describe(title, body)`

‣ Presently, body is *always synchronous*

EXERCISE: ORGANIZE TESTS WITH SUITES

▸ **Wrap tests in suites describing the scenario;** e.g.,

```
describe('when opts.expectsValue is an object', function() {
  it('should throw a TypeError', function() {
  // assertion goes here
 });
});
```

▸ Remember, to run tests:

  ▸ `npm test`

Docs: https://mochajs.org/#getting-started

TESTS IN MOCHA

‣ A **test** in Mocha:

   ‣ Has a `title` **string**

   ‣ Has a body **function**

‣ body **contains an assertion**

‣ `title` **describes behavior**

‣ **Mocha's default API mimics natural language**

‣ *Global* API:

   ‣ `it(title, body)`

‣ body **can return a** `Promise` **or use an** "error-first" (Node.js-style) callback
