A UNIT TEST

▸ We're going to write a **unit test**

▸ A unit test is a test that makes an assertion about a **unit**

▸ A unit is the *smallest testable bit of code*

▸ What is the smallest testable bit of code?

OUR UNIT IS A FUNCTION

▸ Almost always, a unit test will test a single function

▸ We test a function *independently* of other functions

▸ Given we have a single function, `parse()`, that's what we're going to test

▸ But *where do we start*?

▸ Let's look at *bargs*' source again
