OUTPUT: USE A HOOK

```
when opts.expectsValue is an object

  ✓ should throw a TypeError

when opts.expectsValue is a nonzero number

  ✓ should throw a TypeError

when passed a single argument "--foo"

  ✓ should return an object having property foo: true

  ✓ should return an object having no positional arguments

4 passing (10ms)
```

ANSWER: USE A HOOK

test/bargs.spec.js

```javascript
// continued
describe('when passed a single argument "--foo"', function () {
  let result;

  beforeEach(function () {
    result = parse(['--foo']);
  });

  it('should return an object having property foo: true', function () {
    assert.strictEqual(result.foo, true);
  });

  it('should return an object having no positional arguments', function () {
    assert.deepStrictEqual(result._, []);
  });
});
```
